

1.1.1 QM

The institution formulates and executes action plans to ensure efficient implementation of the curriculum, with the involvement of the academic committee of the college and the IQAC. The committee comprises the Director cum Principal serving as the Chairman, the Academic Coordinator, and the teaching faculty as members. The coordinator is responsible for creating the academic calendar and timetable until 2019-2020 session for each semester. Thereafter, Himachal Pradesh technical University Dean Academics is responsible for creating the academic calendar and the Academic in charge/ Coordinator is responsible for creating the timetable to facilitate the scheduling of courses. The Principal and the Coordinator oversee the committee's activity via frequent meetings with its members. In order to ensure the successful execution of the curriculum, the faculty members meticulously construct a lesson plan for each assigned subject, taking into account the nature and extent of the topic, as well as the available teaching hours within a particular semester.

The curriculum delivery is methodically designed via a lesson plan to accomplish the course goals, and this is documented in the course file. The comprehensive lesson plan includes the specific number of instructional hours, a variety of pedagogical approaches used for teaching, and the learning materials for each unit that can be accessed from both the library and internet database. In addition, the required books, reference materials, and extra readings are provided to assist students in achieving the specific goals.

In addition to the usual lessons, instructors guided students' seminars and presentations; guest lectures by specialists from diverse fields that increased the understanding of the students were planned. Group discussion, quizzes, debates, case studies, and presentations serve as collaborative productive activities leading to the production of new ideas and concepts. Clinical teaching approaches like industrial tours, hospital visits, herbal garden trips, etc. are organized to develop the professional skills and life skills necessary to make it on par with global standards.

During conclusive comments, in each class session, informal feedback is collected, assessed, and reflected in the class exam. A conscious effort is made to explain the ideas and enhance the course delivery. The timely deployment of the curriculum delivery is assessed frequently, and the recommendations are updated to suit the goals of the course plan.

Class presentations, group discussions, and class exams are done to allow the students to determine their level of comprehension of the subject. These activities inadvertently enable pupils to prepare for university examinations. It also pushes the students to polish their presentation abilities using information and communication technology.

Adverse Events :-

Any untoward medical occurrence that may present during the treatment with a pharmaceutical product but which does not necessarily have a causal relationship with this treatment

Allopathy :-

Non-traditional, western scientific therapy usually using synthesized ingredients, but may also contain a purified active ingredients extracted from a plant or other natural source

Association

Events associated in time but not necessarily linked as cause and effect or Association of one effect & another effect

Attributable Risk or %

Diff. b/w the risk in exposed population (absolute Risk) & risk in unexposed population

Benefit :-

Estimated gain for an individual or a population

Benefit-risk analysis :-

It refers to parametrization of favourable (beneficial) & unfavourable result of undertaking a specific course of action

Comparison - ...
Baseline's instruction

Control group

Comparison group in drug - trials not being given the studied drug.

Adverse Event Monitoring

Is an active surveillance tool that is used to monitor & document ADRs experienced by patients who have been enrolled to investigate the effect of prescribed medication

Use of more than 1 drug, some times prescribed by different practitioners

Post-marketing

The stage when a drug is generally available in the market

Pre-disposing factors

Any aspect of patient history (other than drug) which explains suspected adverse event (genetic factors, diet, A/C ^{consumption})
Disease history polypharmacy or use of herbal medicine

Prescription Event Monitoring

System created to monitor ADE in a population. Prescribers are requested to report all events, regardless of whether they are suspected ADE for identified patient receiving a specific drug or (covert event monitoring)

BASIC TERMINOLOGIES USED IN PHARMACOVIGILANCE

Absolute risk - Risk in a population of exposed persons, the probability of an event affecting members of a particular population (e.g. 1 in 1,000) absolute risk can be measured over time or at a given time.

ADVERSE Event \div It can also be called as adverse experiences. Any unintended, untoward or unexpected, medical incidence, clinical investigation, undergoing in a patient administered with the medical drug, which might or might not necessarily have any causal relationship with the drug.

ADVERSE DRUG REACTION (ADR) - As per WHO, adverse drug rxn can be defined as any response to a drug which is noxious and unintended & which occurs at doses normally used in man for prophylaxis, diagnosis or therapy of or for the modification of physiological function.

Teacher's Remarks:

ASSOCIATION : Events associated in time but not necessarily linked as cause and effect.

BENEFIT RISK ANALYSIS - It refers to examination favourable (beneficial) and unfavourable results a specific course of action.

BIOLOGICAL PRODUCT - medical product prepared biological material of human, insulin, animal & microbiological origin (such as blood product, vaccine)

CAUSALITY ASSESSMENT - The evaluation of the likelihood that a medicine was the causative agent of an observed adverse reaction. Causality assessment is usually made according established algorithms.

CAUSAL RELATIONSHIP - It means a relationship between one phenomenon or event (A & another B) in which precedes and cause B. In pharmacovigilance - a medicine causing an adverse rxn.

CEM FLOW - Software developed by UMC for collection & analysis of data in cohort event monitoring.

$$\text{PO1 Direct Assessment} = \frac{\sum(\text{level of mapping of PO with CO} \cdot \text{Average of CO attainment})}{\sum(\text{level of Mapping of PO with CO})}$$

*PO's Attainment = more than 70% = Yes, Less than 70% = No

PO's Assessment = $470 / 5 = 94\%$
