PERSONALITY DEVELOPMENT.

"Personality is that pattern of characteristic thoughts, feelings and behaviour that distinguishes one person from another and the persists over time".

"It is the sum of biologically based, learnt behaviour which forms the person's unique responses to environmental stimuli".

① Five Dimensions of Personality :

a). Openness to experience : (inventive/curious vs Consistent/cautious) :

It describes a person's degree of intellectual curiosity, creativity, appreciation for art, emotion, adventure, unusual ideas & variety of experience. It is also described as the extent to which a person is imaginative or independent & depicts a normal preference for a variety of activities over a strict routine. Some disagreement remains about how to interpret ~~Context~~ the openess factor.

b). Conscientiousness [efficient / organized vs. easy-going careless]:

Conscientiousness is a tendency to show self-discipline, act dutifully & aim for achievement
→ It also refers to planning, organization and dependability.

c). Extraversion [outgoing / energetic vs. Solitary / reserved]:

Extraversion describes energy, positive emotion, assertiveness, talkativeness / the tendency to seek stimulation in the company of others. Low extraversion causes a reserved, reflective personality which can be perceived as aloof or self-absorbed.

d). Neuroticism [sensitive/nervous vs. Secure/confident]

Neuroticism is a tendency to experience unpleasant emotions easily such as anger, anxiety, depression and vulnerability. It also refers to the degree of emotional stability and impulse control. It is sometimes referred to by its low pole "emotional Stability".
